Summary

Early-career software developer (Master of IT, Macquarie University) who builds user-facing web and mobile applications end to end: cross-platform front ends, REST API back ends, authentication, cloud sync and automated testing. Writes testable code behind clean interfaces and ships through CI/CD; keen to grow in an agile team delivering customer-facing digital services.

Education

Macquarie University — Sydney, NSW
Master of Information Technology (Artificial Intelligence) — *Jul 2023 – Jun 2025*

Nepal Engineering College, Pokhara University — Bhaktapur, Nepal
Bachelor of Computer Engineering — *2018 – 2022*

Projects

Subbies – Cross-Platform Subscription Tracker | *Flutter, Dart, Firebase Auth, Cloud Firestore* — Live demo

- Built and deployed a **customer-facing app for web, Android and iOS** from one codebase, hosted on Firebase Hosting with a public, no-login demo.
- Designed a **responsive, adaptive UI**: bottom tabs on phones, side rail on tablets, and list–detail sidebar layout on desktop, with light and dark themes.
- Decoupled the UI from data via a **repository interface** (local, Firestore, in-memory), enabling offline use, account sync and fast tests; secured per-user data with Firestore security rules.
- Wrote **automated unit and widget tests** using fakes and a fixed clock, covering date and money logic, controllers, data migration, backward compatibility and layout rules.

Multi-User RAG Chatbot | *Python, FastAPI, REST, SQLite, Streamlit, GitHub Actions* — GitHub

- Developed a **FastAPI REST back end** with OpenAPI docs and a Streamlit front end, integrating document upload (PDF, text, image OCR), search and chat into one end-to-end experience.
- Implemented **JWT authentication** and Argon2 password hashing, with per-user data isolation and persistent conversation history in SQLite.
- Set up a **CI/CD quality gate in GitHub Actions** that blocks merges on failed checks; built hybrid search (FAISS + BM25 + reranking).

Auto Agent ML – Multi-Agent Pipeline Automation | *Python, OpenAI API* — GitHub

- Architected a modular, conversational system where a **central orchestrator** coordinates specialised agents, integrating an external **LLM API** to generate and run Python code.
- Built a **code-verifier agent** that detects runtime errors and iteratively debugs generated code until it executes successfully, with full logs and artifacts per session.

Experience

Research Intern — Feb 2025 – Jun 2025
Macquarie University — *Sydney, NSW*

- Collaborated in a research team to implement a real-time video processing and robot training pipeline in Python (PyTorch), working within a shared codebase.
- Investigated and prototyped automation strategies for robotic manipulation tasks, sharing findings with the team to guide task optimisation.

Technical Skills

Languages: Python, Dart, C, SQL
Web & Mobile: Flutter (web, Android, iOS), FastAPI, Django, Streamlit, REST APIs, JWT authentication, responsive UI
Cloud & Data: Firebase (Auth, Firestore, Hosting), Microsoft Azure, SQLite, MongoDB
Engineering Practices: Automated unit and widget testing, CI/CD (GitHub Actions), Git and GitHub, agile, clean architecture, debugging

Certifications & Publications

- Microsoft Certified: **Azure Fundamentals (AZ-900)** (Jul 2026) | English: PTE 90/90 | Work rights: Subclass 485 visa (full-time)
- Ojha, T. R., & Chaudhary, P. (2022). Enabling Extreme Programming (XP) in Global Software Development (GSD) Practice. *J. Adv. Softw. Eng. & Testing*, 5(3).
